TOBOGGAN ARM BOARD

TAB-CLR

The Phillips Safety Toboggan Arm Boards provide strong, radiolucent support for patient positioning during medical procedures. Made of crystal clear polycarbonate, these arm boards are both radiolucent and extremely strong. They are also MRI safe and sold in pairs.

The contoured top provides stabilizing support for the clinician's arms. At the same time, it helps shield against sharp edges during procedures. For correct positioning, simply slide the toboggan under the pad. The patient's weight will hold it securely in place.

Phillips Safety Toboggan Arm Boards are available in three sizes to accommodate different patients and procedural needs. The dimensions for each size are:

- Small: 10-1/4" L × 6" H × 10-3/4" D
- Medium: 16-1/4" L × 7-3/4" H × 12" D
- Large: 20-1/4" L × 8-3/4" H × 13-1/2" D

The Small size is designed for applications that require a shorter height or narrower width. It works well for upper body procedures and provides a better fit for pediatric, adolescent, and small patients. In addition, its smaller size reduces interference with overhead cameras and other surgical equipment.

The Medium size fits the extremities of most average-size patients. For larger arms and legs, the Large size provides additional space.

SPECIFICATIONS

SHIPPING WEIGHT: from 48 to 160 oz

SHIPPING DIMENSIONS: from 12 x 10 x 10 to 14 x 14 x 24 in

AVAILABLE SIZES: Small, Medium, Large
