The Lead Sheetting 1/8" Thickness is a versatile, multi-purpose product suitable for a wide range of applications, including crafting fishing weights, firearm ammunition, and other artistic creations. Additional uses for lead sheeting include radiation shielding, packing and sealing material, gasketing, ballasts and corrosion resistance lining.

Lead sheets also are an excellent choice for building acoustic control systems, because they serve as an effective and efficient barrier to reduce sound transmission when used alone or fastened to a wall. They can be adhesively bonded to gypsum board or plywood. As a result, acoustical lead sheets improve noise reduction in various environments, including hospitals, schools, office buildings, industrial plants, apartment buildings, and other multi-family buildings. In addition, the Lead Sheetting 1/8" Thickness can be used to line tanks and containers to help prevent corrosion.

This lead sheeting meets QQ-L-201F Grade B specifications and contains a minimum of 99.5% Lead (Pb) for consistent quality and performance. It is available in eight different size variations: 12" x 12", 12" x 24", 24" x 24", 24" x 36", 24" x 48", 36" x 48", 48" x 48", and 48" x 96".

SPECIFICATIONS

SHIPPING WEIGHT: 128–4096 oz

SHEET SIZE: 12" × 12" to 48" × 96"

THICKNESS: 1/8" (0.133")

LEAD CONTENT: 99.5% Minimum

MATERIAL SPECIFICATION: QQ-L-201F Grade B

USES: Radiation Shielding, Packing and Sealing, Gasketing, Ballasts, Corrosion-Resistant Lining, Acoustic Control Systems, Tank & Container Lining, Crafting Fishing Weights, Firearm Ammunition, Artistic Creations
