

TRANSITION SAFETY GLASSES

MODEL 5000

FRAME INFORMATION

The Transition Safety Glasses 5000 are photochromic safety glasses that meet ANSI Z87 safety standards. These wrap-around, semi-rimless safety glasses are ideal for those that work both in indoor and outdoor segments, as they feature Transition gray lenses that turn from clear when indoors to gray when under the sun.

Made of high-quality plastic, the 5000 model is lightweight and highly durable. Plus, its polycarbonate wrap-around lenses offer a close fit and the best impact protection. The 5000 model also features a rubberized nose bridge and soft rubber-tipped temple bars, making this frame style one of our most versatile. In addition, the Transition Safety Glasses 5000 come in black.

Attention! Transitions lenses generally do not work in the car because they are activated by UV rays, and most car windshields have coating block UV.
