PADDED PHENOLIC UNIVERSAL ARM BOARD

AB-36x6-PAD

The Padded Phenolic Universal Arm Board provides comfortable, stable arm support during surgical, imaging, and interventional procedures. Constructed from durable phenolic material with an integrated padded surface, it helps maintain proper patient positioning while enhancing comfort during extended procedures.

The universal mounting mechanism attaches directly and securely to the side rail of the procedure table. This enables quick installation and reliable positioning across a wide range of compatible surgical and imaging tables. Plus, its rail-mounted design delivers stability compared to non-rail-mounted alternatives, helping maintain consistent patient positioning throughout a procedure.

Moreover, the arm board is radiolucent, helping ensure clear imaging without artifact or interference. The integrated padded construction enhances patient comfort, while the smooth phenolic surface is easy to clean and disinfect, supporting infection control protocols in surgical, radiology, and other clinical environments.

Featuring a generous support surface, this arm board accommodates a variety of patient sizes and arm positions. The integrated padding and stable mounting system combine to provide dependable support and patient comfort in demanding clinical settings.

SPECIFICATIONS

SHIPPING WEIGHT: 320 oz

DIMENSIONS: 36 × 12 × 16 in

COLOR: Blue

MATERIAL: Phenolic

FEATURES: Radiolucent, Secure Rail Attachment, Easy to Clean
