PEDIATRIC BUNDLE FLARED EDGE COATED POSITIONERS

PPFP-KIT16

The Pediatric Bundle Flared Edge Coated Positioners is a kit that brings together a selection of foam positioners for patient support and positioning during pediatric medical imaging procedures. Designed for pediatric imaging environments, it includes finger blocks, head supports, and a myelogram block for a range of positioning needs.

The Pediatric Bundle includes **one of each** of the following:

- PPFP-PCAC – Bilateral Pediatric Oblique Finger Flared Edge Coated Block
- PPFP-PCAE – Pediatric Lateral Finger Flared Edge Coated Block
- PPFP-PCAK – Circular Head Flared Edge Coated Block
- PPFP-PCAN – Child Flared Edge Coated Head Holder
- PPFP-PCAQ – Child Flared Edge Coated Head Immobilizer
- PPFP-PCAX – Child Myelogram Coated Block

For added durability, a medical-grade, fluid-resistant coating covers each foam positioner. The coating is easy to clean with medical-grade disinfectant wipes or sprays. It also helps protect the foam interior during repeated clinical use. The flared edge positioners are radiolucent, with low attenuation and minimal shadowing during imaging.

The patented N-VISI-RAY design featured on the flared edge positioners helps significantly reduce artifacts during X-ray imaging. Although the flared sides increase the overall size of the positioners, they do not affect imaging or positioning. The Child Myelogram Coated Block has a traditional non-flared design and is not radiolucent.

Finally, the positioners included in the Pediatric Bundle are MRI Safe and latex-free. This makes the kit suitable for use across a variety of pediatric medical imaging environments.
