BREAST ULTRASOUND & PARACENTESIS BUNDLE FLARED EDGE COATED POSITIONERS

PPFP-KIT23

The Breast Ultrasound & Paracentesis Bundle Flared Edge Coated Positioners is a kit that brings together a selection of foam wedges for patient support and positioning during ultrasound procedures. Designed for breast ultrasound and paracentesis applications, it includes wedges with different angles for a range of positioning needs.

The Breast Ultrasound & Paracentesis Bundle includes **one of each** of the following:

- PPFP-PCBG – 21 Degree Flared Edge Coated Wedge
- PPFP-PCBU – 30-60-90 Multi-Angle Flared Edge Coated Wedge
- PPFP-PCFD – 45 Degree Coated Spinal Body Wedge

For added durability, a medical-grade, fluid-resistant coating covers each foam positioner. The coating is easy to clean with medical-grade disinfectant wipes or sprays. It also helps protect the foam interior during repeated clinical use. The flared edge positioners are radiolucent, with low attenuation and minimal shadowing during imaging.

The patented N-VISI-RAY design featured on the flared edge positioners helps significantly reduce artifacts during imaging. Although the flared sides increase the overall size of the positioners, they do not affect imaging or positioning. The 45 Degree Coated Spinal Body Wedge features a traditional non-flared design and may show artifacts during imaging, particularly where the coating is applied.

Finally, the positioners included in the Breast Ultrasound & Paracentesis Bundle are MRI Safe and latex-free. This makes the kit suitable for use across a variety of ultrasound and medical imaging environments.
